BMW Connected+ now available in Singapore. **Expanding seamless integration into the vehicle.**

Singapore. BMW Asia announced the availability of BMW Connected+, a digital bridge between smartphones and vehicles, in Singapore. The latest version of BMW Connected delivers the next level of in-car personalisation and smartphone content integration on the Control Display.

A new era of connectivity: BMW Connected.

October 2016 marked a very special milestone in the evolution of BMW ConnectedDrive with the launch of BMW Connected in Singapore. In the past, the functions of BMW ConnectedDrive were primarily linked to the car, whereas BMW Connected uses several touchpoints as a platform to pool day-to-day mobility functions – thereby allowing a driver's mobility experience to start before entering their vehicle. BMW Connected was therefore the first step along the road to a fully interlinked world in which the car becomes a smart device; intelligently connected, seamlessly integrated and perfectly in tune with the individual needs and context of each and every user.

The next level of in-car personalisation: BMW Connected+.

At the start of 2017, BMW launched the all-new BMW 5 Series and showcased the potential of personalization through digital services with BMW Connected Onboard – which made its debut in the new model. It represented a major step towards the goal of an overall digital customer profile, providing a personalised mobility experience that not only works in a customer's own BMW, but also in other models from the brand.

BMW Connected+ makes display and operation in the vehicle simpler than ever. At the same time, new services are being introduced that aid individual mobility planning and help users find their way in an ever-more complex world. For the BMW Group, personalisation is the key to really staying in tune with the needs of customers and assisting smartphone usage, both inside and outside the vehicle.

The new services from BMW Connected+.

Send my Routes to Car: Route planning using a smartphone is now easier than ever. After the destination is entered, BMW Connected+ checks whether the car has enough fuel for the journey. If not, BMW Connected+ suggests a suitable fuel stop along the way, which the user can simply add to their route. The route can then be transferred directly to the vehicle. Once in the vehicle, the scheduled stops are displayed and the route can be initiated with a single click.

Share Live Trip Status: With this new feature, the question “What’s your ETA” is now a thing of the past. Current location and time of arrival can be shared by the driver with business partners, friends or family. The driver can send a link via SMS to the people selected via Share Live Trip Status at the start of the journey or if there are delays en route. Using this link will display the user’s current position on a map, along with the arrival time based on real-time traffic data. The big advantage here is that everyone is kept up to date automatically, allowing the driver to stay focused on arriving safely. There is even an option for those waiting to receive further SMS updates if there are any changes to the arrival time.

Navigate Door-to-Door: Finding a parking place at the end of a journey does not always mean arriving at the final destination. Navigate Door-to-Door is a feature designed to guide users on the final leg of their journey (Last Mile) and back to their car when they are ready (First Mile). Once the car is parked, the driver will receive a message on the car’s display confirming that their smartphone is now ready to provide directions to continue on foot. At the same time, BMW Connected+ sends a push notification to the user’s smartphone to initiate navigation on foot.

If the driver has appointments later in the day, the “Time to Leave Notification” function familiar from BMW Connected can let them know the ideal time to set off in order to arrive punctually. This takes into account the time needed to walk to the BMW and can display navigation information on a smartphone or smartwatch.

My Destinations: This feature provides rapid access from any connected device to both contact information in the user’s address book and the most recently visited destination stored in the navigation system. This intelligent destination search function is linked with the user’s contacts, so choosing the next destination is as simple as entering someone’s name and selecting the associated address.

Thanks to BMW Connected Onboard, BMW Connected+ transforms the user's vehicle into a personalised control centre for digital mobility. Once the driver's smartphone has seamlessly connected to the car, they can access selected features via the car's central display.

BMW Connected+ is available on iOS devices and can be downloaded for free on the App Store. To use the app, customers must have a smartphone, update their current BMW Connected app to release version (6.0) and ensure that their vehicle is specified with this option: ConnectedDrive Services (6AK). The updated version of this app will be available on Android devices at a later date.

-End-
