COLOUR ONE for MINI by Scholten & Baijings.

During the Salone del Mobile 2012, MINI presents a probing, thought-provoking and inspiring concept created by the Dutch design duo.

Munich/Milan. On the occasion of the Salone del Mobile 2012, MINI presents the installation COLOUR ONE for MINI by Scholten & Baijings. This work by the internationally renowned Dutch design duo explores the design of a MINI One by examining its composition down to the smallest details and, in so doing, dissecting the design process per se.

The upshot is a thought-provoking and inspiring new interpretation that draws on the familiar stylistic devices of Scholten & Baijings – colour and material – to query the rules of automotive design and shed new light on them.

COLOUR ONE for MINI by Scholten & Baijings runs until 28 April 2012 as part of the INTERNI Legacy exhibition at the University of Milan.

The path is the goal: automotive design redefined.

Fascinated by the principle of concept cars, Stefan Scholten and Carole Baijings set about deconstructing the MINI One. As MINI’s base model, the MINI One inherently and recognisably embodies all the hallmark attributes of the brand, thus presenting itself as the ideal vehicle for tackling fundamental issues concerning all aspects of MINI design.

Scholten & Baijings peeled the MINI One like an onion, layer by layer, while analysing the car as such and its individual components. Applying their highly conceptual approach, the designers questioned virtually every aspect of design along the way, extracting the essence of each component, whether this was revealed at its core or during the dismantling process itself. The Dutch designers complemented the stripped parts with colour and texture in characteristic Scholten & Baijings fashion. In close collaboration with the MINI design team, this not only gave rise to a very free interpretation of the frame, but also spawned so-called “Art Parts” – components that were extracted as a whole from the car and...
in their ensuing “autonomy” permit an entirely fresh perspective on car design. They include, for example, transparent tyres made of cast resin, which were produced in cooperation with industrial designer and polyester specialist Vincent de Rijk, who has already realised numerous projects for OMA, the architecture firm of Rem Koolhaas. In their deconstructed form, the seats and seatbelts recall the brand’s rally heritage and have been lined with specially developed fabrics. The doors have been taken out and are displayed separately from the car with three-dimensional golden textures or a matt porcelain paint finish developed jointly with MINI Design. Bags integrated into the frame and a sun visor that doubles as a clutch augment the potential spectrum of aesthetic reinterpretation by Scholten & Baijings. Not least of all, the landscape views displayed in the exhibited windows open up a rather special perspective on mobility: depending on whether look to the back, the side or the front, you find yourself looking at the past, present or future.

In their presentation, Scholten & Baijings once again take up the theme of MINI’s racing heritage: COLOUR ONE for MINI by Scholten & Baijings is staged in a stylised racing paddock. Since the process of lending shape to objects is the focus of this work, the exhibits are joined by showcases containing colour and material samples along with inspiring objects, images and snapshots from the creative process behind the installation.

**Freedom of scope for fresh thinking at MINI Design.**

For a long time now, the MINI design team has been cultivating dialogue with external designers and creative professionals. In addition to fostering creative exchange, the aim is also to discover new aspects of design that go beyond conventional automotive design. “The BMW Group has for many years collaborated with creative people from a wide and varying range of fields,” says Anders Warming, Head of MINI Design. “In Scholten & Baijings we have managed to enlist a design duo who are known worldwide for their eclectic
creations and who work at the interface between design and art. Their completely untrammeled view of our design, free of any conventions, is an immense source of inspiration for the entire MINI design team.”

He goes on: “Indeed, the new functions that Stefan Scholten and Carole Baijings have thought up and the way in which they approach materials makes for a vast reservoir of ideas that has inspired our work from day one.”

**Sophistication that goes deep: Scholten & Baijings.**

“For us this collaboration is the fulfilment of a dream that virtually any product designer would cherish,” says Stefan Scholten about the significance of this project for his design studio. “Being able to apply our thinking to such a ubiquitous product as the car is a fantastic opportunity for our work. The questions we asked ourselves and the solutions we worked out were an eye-opener for everyone involved. We are delighted with this unique collaboration which also reflects, not least of all, the commitment of every individual concerned.” Yet COLOUR ONE for MINI by Scholten & Baijings doesn’t aim to inspire only those immediately involved: “Even outsiders who are open to the work can be inspired by its underlying depth and might even be encouraged to rethink their own way of approaching things,” says Baijings of the inspirational potential of the installation.

Scholten & Baijings combine minimal forms, a balanced use of colour, traditional craftsmanship and industrial production methods to create a unique design style that doesn’t necessarily invite the label “Dutch”. The international design scene follows with keen interest the sensitivity, enticing colours and subtle use of materials the designers apply to their creations. Both their independent projects and their commissioned work are collected and exhibited worldwide.

INTERNI Legacy.
The INTERNI Legacy exhibition staged by the renowned Italian design magazine INTERNI presents MINI as one of the main protagonists with the design installation COLOUR ONE for MINI by Scholten & Baijings. As part of the Fuori Salone 2012, the installation will be on display at the Cortile del 700 of Milan University (Università degli Studi di Milano). Other designers represented at the show include Patricia Urquiola for Missoni. The installation can be viewed between 9.00 and 24.00 hrs from 16 to 22 April 2012. From 23 to 28 April the exhibition closes at 21.00 hrs.

The BMW Group
The BMW Group is one of the most successful manufacturers of automobiles and motorcycles in the world with its BMW, MINI, Husqvarna Motorcycles and Rolls-Royce brands. As a global company, the BMW Group operates 25 production and assembly facilities in 14 countries and has a global sales network in more than 140 countries.

In 2011, the BMW Group sold about 1.67 million cars and more than 113,000 motorcycles worldwide. The profit before tax for the financial year 2011 was euro 7.38 billion on revenues amounting to euro 68.82 billion. At 31 December 2011, the BMW Group had a workforce of approximately 100,000 employees.

The success of the BMW Group has always been built on long-term thinking and responsible action. The company has therefore established ecological and social sustainability throughout the value chain, comprehensive product responsibility and a clear commitment to conserving resources as an integral part of its strategy. As a result of its efforts, the BMW Group has been ranked industry leader in the Dow Jones Sustainability Indexes for the last seven years.
