## **BMW Group Plant Dingolfing Fact Sheet**

- **1973: start of production** of BMW automobiles in Dingolfing.
- **Largest production facility in the BMW Group's global production network** of 30 locations in 14 countries, based on employee and production figures.
- **Competence centre** for production of **large BMW model series**.
- **Around 17,500 employees** and **800 apprentices**.
- High level of flexibility – most extensive production portfolio of all BMW Group automobile plants, with **17 different vehicle models**.
- **Around 1,600 BMW 3 Series, 4 Series, 5 Series, 6 Series and 7 Series** vehicles produced per working day for customers all over the world.
- **2014: production of 369,027 vehicles** – which means **almost one in five BMW brand automobiles** was produced in Dingolfing in 2014. The BMW Group produced a total of more than one million vehicles at its German production sites in 2014 for the fourth consecutive year.
- In addition to its core automobile production, **production of vehicle components, such as pressed metal parts, seats and chassis and drive train components** is also based in Dingolfing. The plant also produces **body shells** for **Rolls-Royce models**.
- Building on its expertise in aluminium chassis construction and **long-term experience with alternative drive trains**, Dingolfing also supplies the BMW Group's Leipzig plant with components, such as high-voltage batteries, electric transmissions and Drive structure for production of BMW i models. High-voltage batteries and electric motors for plug-in hybrids for the core BMW brand will also be supplied by Dingolfing in the future, making the location the company's **competence centre for production of electric drive systems**.
