Rounding the final corner to series production:
The new BMW M8.

Highlights.

- New BMW M8 (Fuel consumption combined: 10.8 – 10.7 l/100 km [26.2 – 26.4 mpg imp]; CO₂ emissions combined: 246 – 243 g/km) in the final phase of the series production development process.

- Customary BMW M dynamic prowess, agility and precision enter a new dimension.

- Performance-oriented vehicle concept with minimised weight, low centre of gravity, even weight distribution, optimum wheelbase and wide tracks.

- M-specific optimisations further increase already high levels of rigidity in the body structure, chassis components and chassis mounting.

- M-specific suspension delivers exceptional directional stability, steering precision and cornering dynamics.

- High-revving V8 engine with M TwinPower Turbo technology produces north of 440 kW/600 hp. Fully variable transfer of power via M xDrive all-wheel-drive system with rear-wheel bias and 2WD mode.

- Market launch of the BMW M8 Coupe in the course of 2019. Further model variants: BMW M8 Convertible, BMW M8 Gran Coupé.

All figures relating to performance, fuel/electric power consumption and emissions are provisional.

The fuel consumption, CO₂ emissions and electric power consumption figures were determined according to the European Regulation (EC) 715/2007 in the version applicable. The figures refer to a vehicle with basic configuration in Germany. The range shown considers the different sizes of the selected wheels/tyres and the selected items of optional equipment, and may vary during configuration.

The values are already based on the new WLTP test cycle and are translated back into NEDC-equivalent values in order to ensure comparability between the vehicles. With respect to these vehicles, for vehicle-related taxes or other duties based (at least inter alia) on CO₂ emissions, the CO₂ values may differ from the values stated here (depending on national legislation).

Further information on official fuel consumption figures and specific CO₂ emission values of new passenger cars is included in the following guideline: ‘Leitfaden über den Kraftstoffverbrauch, die CO₂-Emissionen und den Stromverbrauch neuer Personenkraftwagen’ (Guide to the fuel economy, CO₂ emissions and electric power consumption of new passenger cars), which can be obtained free of charge from all dealerships, from Deutsche Automobil Treuhand GmbH (DAT), Hellmut-Hirth-Str. 1, 73760 Ostfildern-Scharnhausen and at https://www.dat.de/co2.
