Boundless spirit of adventure: MINI Countryman D at Mount Fuji.

Plenty of space for equipment and brand-typical handling make the MINI Countryman the ideal companion for adventures at Japan's largest mountain. In striking Blazing Blue and Favoured Trim, it is sure to turn heads.

Munich/Tokyo. The MINI Countryman D combines typical MINI handling with efficient diesel technology. With an output of 163 hp (120 kW) and 400 Nm of torque, the largest member of the MINI family is just as impressive in Tokyo's dense traffic as it is on the roads around Mount Fuji.

The generous luggage compartment with 450 up to 1450 litres offers enough space for outdoor equipment – ideal for enjoying the beauty of nature on spontaneous trips or extended tours.

The striking Favoured Trim emphasises characteristic design elements such as the octagonal front grille in Vibrant Silver. These create a splendid contrast to the outer body paintwork. The clear surfaces in Blazing Blue give the vehicle a strong presence.

With this release, we are providing new images of the MINI Countryman D.

CO2 Emissions & Consumptions

MINI Countryman D (WLTP combined: Energy consumption 5,1 l / 100 km; CO2 emissions 135 g/km; CO2 class: D).

All of the stated model variants, equipment features, technical data relate to the German market. Energy consumption and emission figures relate to the German PKW-EnVKV regulation.

Fuel consumption, CO₂ emission figures and power consumption were measured using the methods required according to Regulation VO (EC) 2007/715 as amended. They refer to vehicles on the German automotive market. For ranges, the NEDC figures take into account differences in the selected wheel and tyre size, while the WLTP figures take into account the effects of any optional equipment. For vehicles newly type-approved since 01.01.2021, the official specifications exist only according to WLTP. In addition, according to EU Regulation 2022/195, the NEDC values will no longer be included in the EC certificates of conformity as of 01.01.2023.

All figures have already been calculated based on the new WLTP test cycle. NEDC figures listed have been adjusted to the NEDC measurement method where applicable. WLTP values are used as a basis for the assessment of taxes and other vehicle-related duties which are (also) based on CO₂ emissions and, where applicable, for the purposes of vehicle-specific subsidies. Further information on the WLTP and NEDC measurement procedures is also available at www.bmw.de/wltp.

For further details of the official fuel consumption figures and official specific CO₂ emissions of new cars, please refer to the "Manual on the fuel consumption, CO₂ emissions and power consumption of new cars", available at sales outlets free of charge, from Deutsche Automobil Treuhand GmbH (DAT), Hellmuth-Hirth-Str. 1, 73760 Ostfildern-Scharnhausen and at <https://www.dat.de/co2/>.
